1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rabarot et al (see Figs. 7A and 7B).

Rabarot et al (Fig. 7B) discloses a method of forming a compact movable structure for a light shaping unit (mobile microlens 84) comprising the steps of forming the light shaping unit—lens— from a material (80) deposited on a silicon carrier (86) and forming a micromechanical structure (opening or channel 88) from the carrier, the applied reference essentially lacking a clear teaching as to when the micromechanical structure is formed. Given that it is well known to etch structures from above or below elements located on a substrate, and that the opening 88 is etched in the silicon substrate that is located just below the microlens, it is submitted prime facie obvious to have formed the light shaping unit before the forming of the opening 88 in Rabarot et al as specified in instant claim 1. Spinning the material that forms the light shaping unit onto the silicon substrate certainly would have been an obvious way to deposit it thereon as such is conventional in the art. While Rabarot et al forms the microlens lithographically, it is well known to make lenses through embossing and such would have been an obvious feature in lieu of lithographic processing dependent on mask and/or mold/die availability. Rabarot et al attaches an optical component (110) to the bottom side of the micromechanical structure (88) as set forth in instant claim 9.
